

SAFETY INSTRUCTIONS

- ✦ Read this manual carefully before using the generator.
- ✦ Use only the supplied charging cable. Do not attempt to charge with incompatible adapters.
- ✦ Use only drinking water. Do not fill with carbonated or flavored liquids.
- ✦ Do not submerge the generator in water or rinse it under running water.
- ✦ Do not open the housing while the generator is operating.
- ✦ Do not use the device at temperatures above 113°F (45°C) or below 32°F (0°C).
- ✦ Do not leave the device unattended for long periods.
- ✦ Wipe the main unit with a soft dry cloth for cleaning.
- ✦ Do not wash the lid, body, or main unit in a dishwasher.

TECHNICAL SPECIFICATIONS

Product Name:	Laikfvea Hydrogen Water Generator
Dimensions:	Go 2.8 × 2.8 × 8.9 in (71 × 71 × 225 mm)
Hydrogen Concentration:	1300–1500 ppb*
ORP Value:	down to –650 mV*
Power Consumption:	≤5 W
Battery Capacity:	1500 mAh (rechargeable lithium
Charging Port:	battery) USB Type-C
Water Type:	Drinking water
Water Temperature:	up to 176°F (80°C)
Water Capacity:	13.5 fl oz (400 ml)
Device Lifespan:	approx. 8000 hours
Electrolyzer Lifespan:	approx. 8000 hours
Membrane Type:	DuPont™ Nafion™ N117
Electrode Material:	Titanium with platinum coating (Pt–Ti)
Body Material:	Borosilicate glass + BPA-free PC/ABS
Net Weight:	0.83 lb (375 g)
Gross Weight:	1.60 lb (725 g)

Values marked with * are approximate and may vary depending on water quality and usage conditions.

USER MANUAL
Please read the instruction
manual carefully before
using the device

DESCRIPTION OF THE HYDROGEN WATER GENERATOR

The hydrogen water generator is a household electric device that enriches drinking water with molecular hydrogen during operation.

The principle of operation is based on electrolysis: when an electric current passes through the water, molecular bonds are broken, and hydrogen gas is produced.

The generator is designed to produce drinking water enriched with hydrogen.

BENEFITS OF HYDROGEN WATER:

Powerful antioxidant that neutralizes free radicals;

Strengthens the immune system;

Improves blood rheology (fluidity) and prevents thrombosis;

Promotes overall body rejuvenation;

Reduces fatigue and increases stress resistance;

Helps normalize metabolism.

Portable hydrogen water generators are a convenient solution for use at home, at work, or while traveling.

To prepare healthy water, simply fill the generator with drinking water and start the process.

PACKAGE CONTENTS

01. Hydrogen water generator

02. USB cable

03. Power adapter

04. User manual

STRUCTURE OF THE HYDROGEN WATER GENERATOR

Main components:

01. Pressure release valve;
02. Lid;
03. Body;
04. Main unit.

Charging port location:

The Type-C charging port is located on the side of the base. Connect the charging cable securely to ensure proper charging.

HOW TO USE

The generator starts working after **pressing the power button**.

A small amount of water may remain inside — this is normal.

Do not run hydrogen generation while charging.

HYDROGEN WATER PREPARATION PROCESS:

Before first use, fill the container with clean drinking water (95–113°F / 35–45°C) and let it sit for 20–30 minutes. Then empty it and refill with fresh water before each use. The recommended amount is 10 fl oz (300 mL).

01. Press the power button. The indicator will light up, and the generator will start producing hydrogen water. You will see active bubble formation inside the container — this is normal. The process duration is about 5 minutes.
02. When the generator finishes, it will automatically shut off. Press the pressure release valve on the lid first, then open the lid. You can now drink the hydrogen-enriched water.

OPERATING RECOMMENDATIONS

- + Use only drinking water. Do not use carbonated, sweetened, or flavored drinks.
- + Drink the hydrogen water immediately after preparation.
- + The water temperature should not exceed 113°F (45°C).
- + Do not leave water in the generator for more than 4 hours.
